1. Team Number

Team Number:3

2. Team name

Web-E-Vill

You will collectively choose a name for your team to represent a vision you have for the application you're creating. It can be used in addition to your Team Number for all deliverables and presentations.

3. Team Members

Sami Yohannes, Sayo4369@colorado.edu , sayo4369
Samuel Lauer, sala1908@colorado.edu, sala1908
Macallan Finigan, Mac.Finigan@colorado.edu, Pinecone 2112
Denys Davydenko, deda7362@colorado.edu, s-ddavydenko

put name, email, git username

4. Application Name

WeDraw

5. Application Description

This app is a collaborative pixel art canvas inspired by Reddit's r/place. Users can join a shared digital canvas and place their own colored pixels to add to a collective piece of art or start their own. The platform encourages creativity and community collaboration by allowing anyone to participate in making a piece of art.

The application provides tools for selecting colors, and viewing the full collaborative piece as it develops over time. The result is a constantly changing piece of art that reflects the imagination of its community.

6. Audience

The target audience for this application is casual creatives, primarily on the younger side who enjoy art ,and social experiments on the internet. The ideal user has some familiarity with pixel art or online drawing platforms, but no advanced skill is needed. The core problem this application solves is the lack of easy, fun and collaborative spaces to enjoy art. Most art tools are solo, while this app makes creativity collab.

From a usability standpoint, it is designed to be straightforward. The users should be able to join the canvas and place their first pixel after arriving. Accessibility considerations include clear color contrast, zoom functionality if needed, and simple controls.

7. Vision Statement

A simple, one or two sentence statement describing the clear and inspirational desired state resulting from your team's efforts to create your application. Following is a template you might want to use:

For internet users who enjoy participating in social experiments. The Web-E-Vil is a game that is uniquely seated between the genres of multiplayer co-op, and social experiment. Unlike a typical multiplayer video game, our product will encourage new perspectives on our role in a community.

Examples

- Amazon: "To be Earth's most customer-centric company, where customers can find and discover anything they might want to buy online."
- Tesla: "To create the most compelling car company of the 21st century by driving the world's transition to electric vehicles."
- Facebook: "People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."
- CU Boulder: "To be a leader in addressing the humanitarian, social, and technological challenges of the twenty-first century."
- IKEA: "To create a better everyday life for many people."
- Nordstrom: "Offer the customer the best possible service, selection,quality, and value."
- Google: "To provide access to the world's information in one click."

8. Version Control

https://github.com/sala1908/web-app-social-experiment/tree/main

- TeamMeetingLogs - The minutes of the meeting with your TA every week will be recorded in a file here. You will be updating the same file every week with the latest updates. Points to include in the minutes would be:
    - Decisions made
    - Alternative actions/options discussed
    - Follow-up items, including agreed-on roles and responsibilities

- MilestoneSubmissions - All course-related documents, including this one, will be stored in this folder.
- ProjectSourceCode - The source code and all relevant project documentation for the application will be stored in this folder.
- ReadMe.md - Refer to the **project guide** for more information on this.
    - For a detailed view of your repository, refer to the **project guide**
- .gitignore - Please remember to create a .gitignore file in your "ProjectSourceCode" folder in the repository

9. Development Methodology

Since this project is scheduled for 4 weeks, we encourage you to use an Agile Methodology. You can also use a hybrid set of practices from different methodologies. For example, you can use Scrum meetings and Kanban boards to track the progress of your project. The important thing is to have a plan and stick to it.

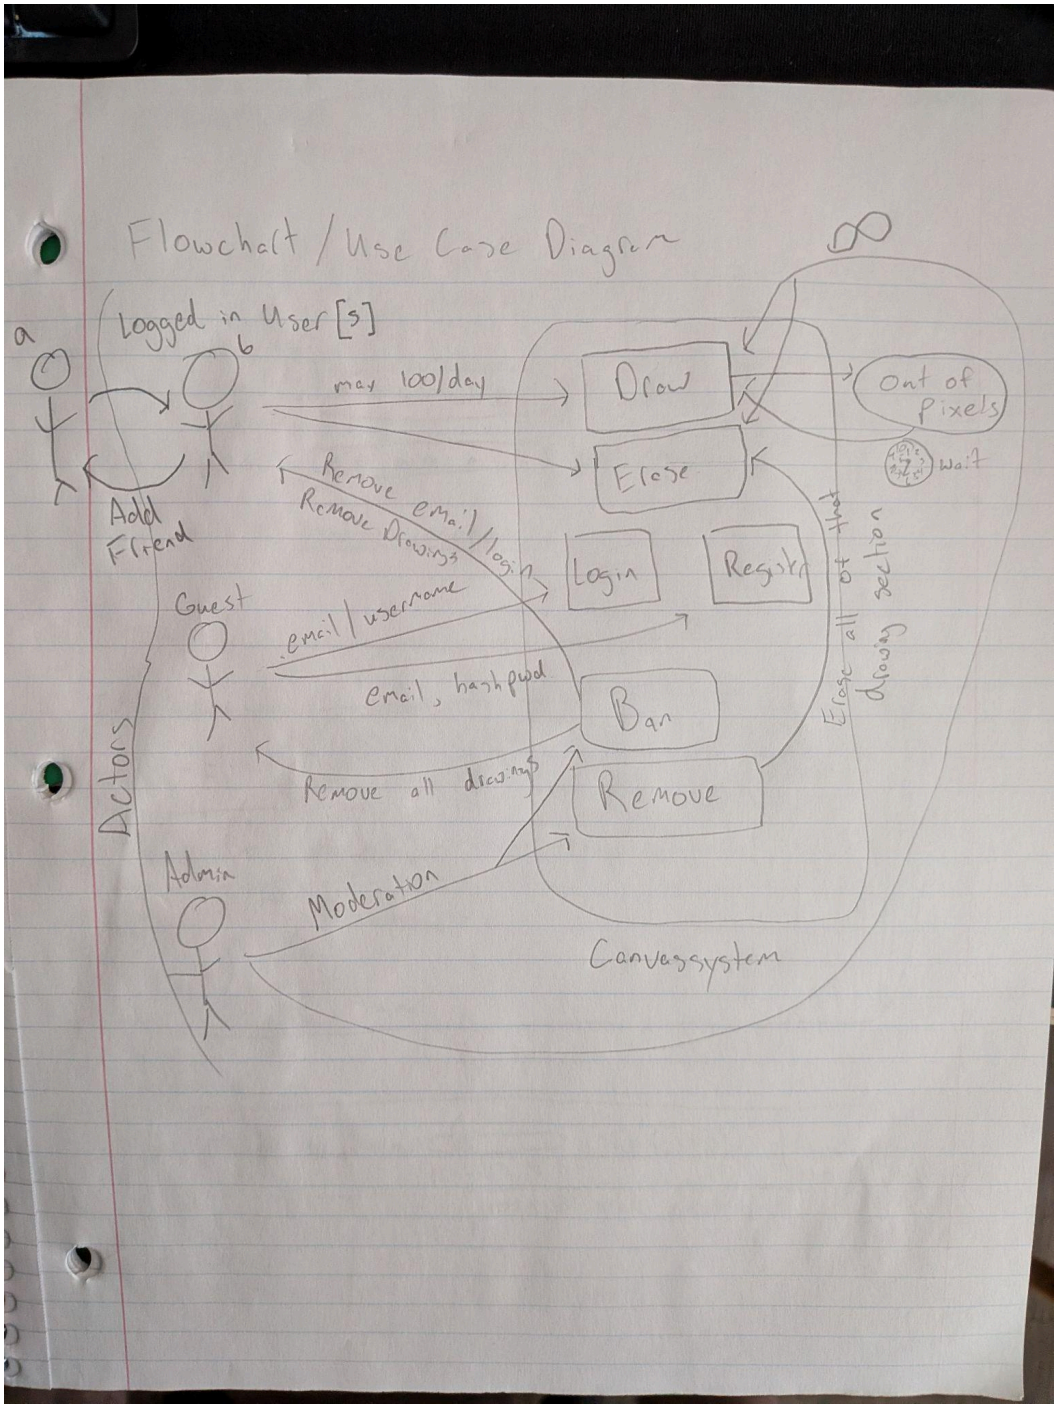
10. Communication Plan

Discord, and Email. Github for version control.
TIP

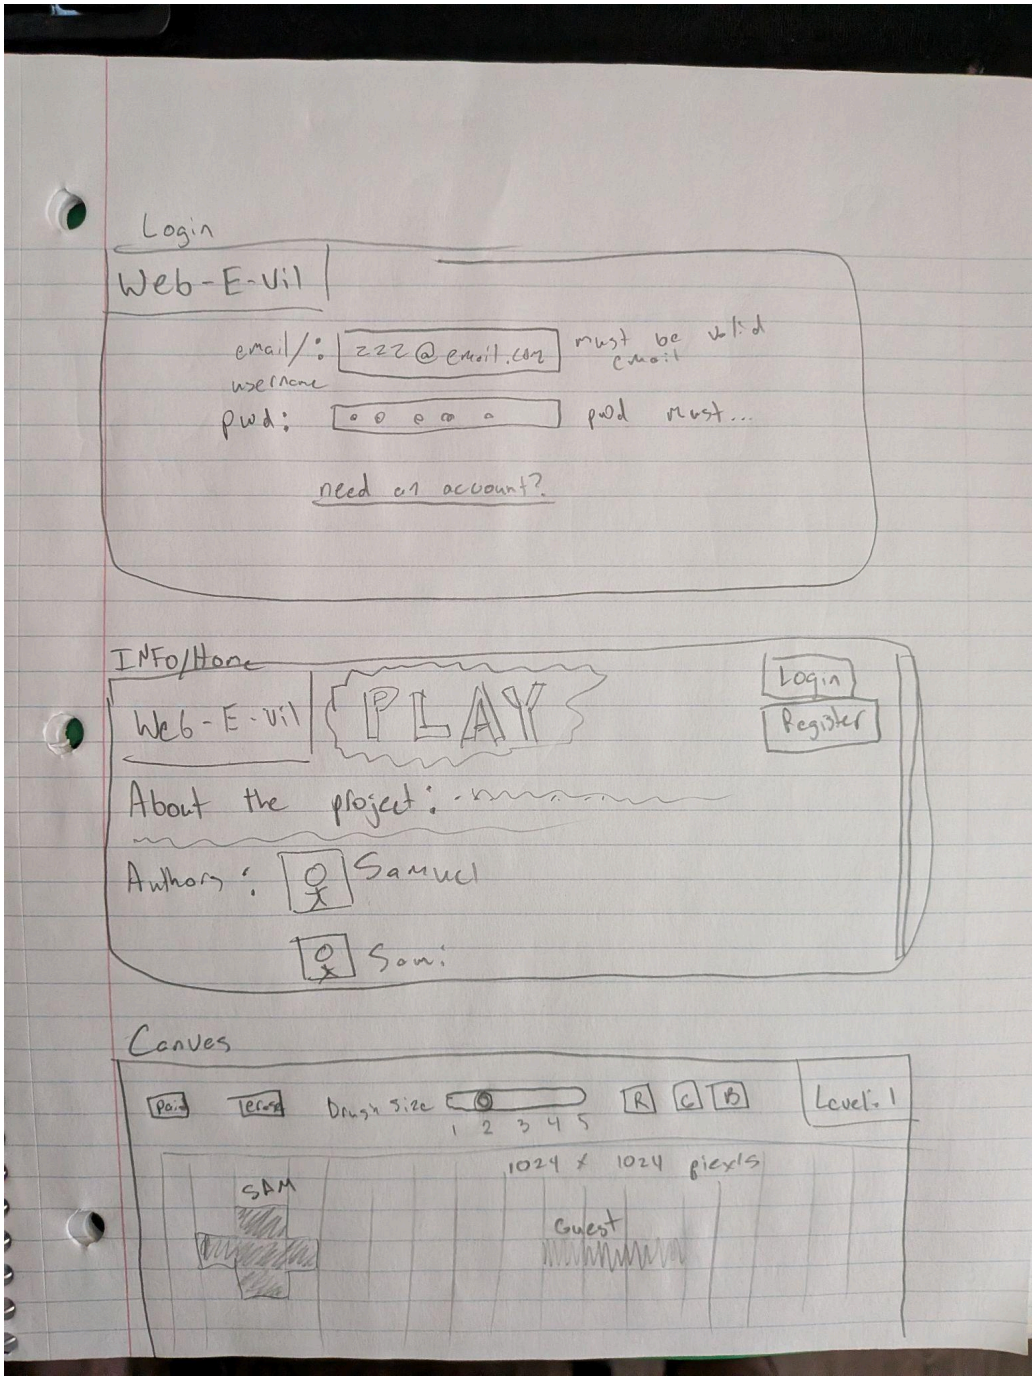
11. Meeting Plan

- Team Meeting: TBD. Modality: Zoom
- Weekly meeting with TA: Wednesday 10:30 am. Modality: Zoom
    - Please refer to **these instructions** for expectations in your weekly meeting with your TAs. Do read the entire section carefully.

12. Use Case Diagram



13. Wireframes



14. Extra Credit

Risks:

Trolls spamming the canvas

Severity: High

Risk: Users can flood the canvas with junk pixels or repeated reactions.

Mitigation: Keep paint limits, rate limit actions, and give admins quick remove and ban tools.

Offensive or inappropriate bubble names
Severity: High
Risk: Bubble titles could be used for abusive or hateful text.
Mitigation: Validate titles, limit length, and let admins remove offensive bubbles quickly.

Abuse of moderation features
Severity: High
Risk: If admin actions are not checked properly on the server, regular users may try to use them.
Mitigation: Enforce role checks server-side, not just in the UI, and validate every destructive request.
Banned users creating new accounts
Severity: High
Risk: A banned user may try to sign up again with the same email.
Mitigation: Keep the blacklist check on registration and match emails in a case-insensitive way.

Scope creep
Severity: Medium
Risk: The project can grow too large if extra social or game features keep getting added.
Mitigation: Stick to the core canvas features first, freeze non-essential features, and only add extras after the base app works
